Background

Recognising the need to develop both tourism and commerce in the United Arab Emirates and more especially in Abu Dhabi, the National Corporation for Tourism & Hotels (NCT&H) was formed in 1996 as a semi-government joint venture with the Abu Dhabi Investment Company.

Its key objective is to promote Abu Dhabi as an international leisure and tourism destination, supervise and manage hotels and all its related services, provide transportation and catering services. NCT&H has the mission of evaluating and investing in attractive business ventures in the tourism and hospitality industry in the Emirate of Abu Dhabi, the UAE, and elsewhere in general.

Challenge

NCT&H noticed a high level of spam email that affected the performance of its network's bandwidth as well as delayed response time to critical email messages. It needed to find an email security solution that could not only reduce spam email dramatically but also be deployed immediately without huge investments in hardware infrastructure.

NCT&H conducted extensive research and reduced its final evaluations to two products including Postini, a wholly owned subsidiary of Google Inc. The corporation ran a 15-day proof of concept before deploying Postini.

Solution

NCT&H selected Postini because it fitted its criteria perfectly. It did not need any hardware infrastructure investment and could be deployed immediately.

Postini Email Security delivers the highest enterprise-class service levels for availability, reliability, support, and scalability. With multiple redundant data centers around the world, massive storage and bandwidth, Postini is able to promise and deliver 99.999% availability, and 24x7 support both directly and through FVC, as its local partners.

Postini Email Security ensures email is free from threats and junk mail, increasing productivity. It blocks spam, viruses, phishing, and email threats, and provides sophisticated message management and policy enforcement. In addition, policy compliance is assured via Postini's automated archiving, which provides a Google-like interface for email discovery and retrieval.

Postini's on-demand service deploys quickly, requiring no on-site hardware or software. With Postini you will realize immediate capital and operating cost reductions; your costs of email security and compliance will be known and predictable, month-to-month. Postini's patented technology platform provides highly accurate filtering, multiple redundant layers of threat protection, granular administrative controls, and unmatched performance.

Result

Since its deployment, Postini has reduced NCT&H's spam and malicious mail to almost zero for all its users.
